

Solution Requirements

Date	29/09/2026
Team ID	UNM1425LegalEase: AI-Powered Legal Document Generator
Project Name	LegalEase: AI-Powered Legal Document Generator
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Users enter document details in Streamlit; no login method is specified in the project.	Medium
2	Authorization levels	Role-based access is not specified; prototype users can generate, edit, preview and download documents.	Low
3	External interfaces	Google Gemini API through FastAPI; sends document type, parties, terms and dates and receives generated content.	High

		The system connects to the Gemini service to generate legal document content.	High
4	Transactions processing	FastAPI /generate accepts the document request, validates it and returns generated text for preview and export.	High
5	Reporting	Creates TXT, DOCX and PDF outputs with headings, terms, logo and footer formatting.	High
6	Business rules, etc.	Uses document type, parties, terms and effective date; terms can be supplied as semicolon-separated clauses.	High
7	Compliance to laws or regulations	Sensitive inputs and API credentials should be handled securely; specific GDPR/HIPAA compliance is not stated.	High
8	<i>Other</i>	Provides editable preview plus download options for TXT, DOCX and PDF.	High

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria

1	Performance & Speed	Smooth processing for normal inputs; exact response time is not specified.	Functional response without errors.
2	Scalability	Modular FastAPI and Streamlit structure supports future growth and deployment.	Works as usage grows.
3	Security & Data Privacy	Keep legal-document inputs and API credentials protected through secure environment configuration.	API key stored in .env; secrets not exposed in UI.
4	Reliability & Availability	Frontend, backend and document generation should complete the workflow reliably.	Generation, editing and download complete correctly.
5	Usability & Accessibility	Simple Streamlit inputs with clear Generate, Edit, Preview and Download actions.	User can complete the workflow without avoidable errors.
6	Other	Modular FastAPI routes, Gemini generator and formatting utilities support maintainability.	Clear separation of frontend, API, AI and formatting modules.
