Team ID	UNM1425LegalEase: AI-Powered Legal Document Generator
Project Title	LegalEase: AI-Powered Legal Document Generator
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

LegalEase simplifies legal document creation with Generative AI, providing customizable, accurate and editable templates for employment contracts, lease agreements, NDAs and other legal documents. It combines a Streamlit frontend, FastAPI backend and Gemini 1.5 Pro, with secure data handling, branding and export to TXT, DOCX and PDF.

Project Overview	
Objective	Enable users to generate professional-grade legal documents from document type, parties, terms and dates, then review, edit and export the result.
Scope	Address the difficulty of creating structured legal documents without a legal background through guided inputs, AI generation, editable previews and formatted exports.
Problem Statement	
Description	Users may need contracts, NDAs, leases or employment documents but face complex legal language, limited legal knowledge and access/cost barriers.
Impact	LegalEase provides accessible AI-assisted drafting with customizable templates, clear sections, editable output, branding and multiple download formats.
Proposed Solution	
Approach	Use Gemini 1.5 Pro through the FastAPI backend to generate structured legal text from user inputs, then format it through DOCX, PDF and HTML preview utilities.
Key Features	AI-powered legal document generation; editable preview; automatic terms tables; custom logo/fonts; TXT, DOCX and PDF export; secure handling of sensitive data.

	FastAPI /generate endpoint; Gemini integration; responsive Streamlit UI; editable previews and multi-format downloads.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	Local environment for running FastAPI, Streamlit and document-generation utilities.	Python 3.10+; local development/runtime environment
Memory	Runtime memory for the application; exact allocation is not specified in the source.	Not specified in source
Storage	Stores project files and exported legal documents.	Project files and generated TXT/DOCX/PDF exports
Software		
Frameworks	Backend API and frontend interface frameworks.	FastAPI, Streamlit
Libraries	AI SDK, document formatting, PDF, image, HTTP and environment-variable utilities.	google-generativeai, python-docx, fpdf, Pillow, requests, python-dotenv
Development Environment	Development setup used to run and configure the application.	Python + pip; virtual environment; .env
Data		
Data	Structured inputs supplied by the user to generate the legal document.	User inputs: document_type, parties, terms, dates
